

Jose Briceño

Vuejs - React Frontend Web Developer

Work Experience

Frontend Developer

IIDforIdeas. | July 2022 - Present

Part of the Frontend team using HTML, CSS, ReactJS. In charge of uniting the 381 team and serving as a mediator between them to be able to reach agreements on the project and promote it for its realization and production.

Projects Developed:

Portfolio

August 2022

My first portfolio, i developed this page using a video from freeCode Camp though i used my own tools to do it. I used HTML5, CSS3 - TailwindCSS, and Vuejs. Some challenges for me was to use the Light Mode, wich i get a solution and was the use of pinia in dynamic classes. Another issue was to have a page where i use english and spanish languages, so i use i18n, it's a vue feature where you can use exactly that, page where you have multiples languages.

Skills used: HTML, CSS, Vuejs, pinia, vue i18n, TailwindCSS.

Pizza Store

July 2022

This was my first project. It's a store where you first login, with a clasical email or you can login with a gmail, so you visit the home page and you choose witch store you want to visit. A better way to do this was add a search bar where you write a favorite store. Inside you choose wich pizza you want to eat. Issues here was the login, and the breakpoints. The first one i used Firebase and their login methods. I used too a Google Method to login. Breakpoints was something new to me at the time but i achieved to developpe a good responsive.
